

TECHNICAL SPECIFICATION

Orbit Support API Technical Specification

Fictional document created for RAG development and evaluation

Document ID	NS-API-021	Version	2.1
Owner	Orbit Engineering	Effective date	1 August 2026

1. Access

Version 2 uses UTF-8 JSON over HTTPS. The sandbox base URL is `https://api.sandbox.northstar.example/v2`. Authentication uses OAuth 2.0 client credentials. Access tokens are valid for 60 minutes.

2. Endpoints

Method	Path	Purpose
POST	/tickets	Create a ticket
GET	/tickets/{ticket_id}	Read one ticket
GET	/tickets	List tickets
GET	/knowledge/articles	Search published articles

3. Limits and errors

1. The default page size is 25 and the maximum is 100.
2. The standard rate limit is 120 requests per minute per client.
3. POST /tickets accepts an Idempotency-Key retained for 24 hours.
4. A 429 response includes Retry-After. GET requests may be retried up to three times with delays of 0.5, 1 and 2 seconds.
5. The client timeout is five seconds for connection and fifteen seconds for the complete response.
